

Sunset

Product Requirements Document

Executive Summary

Sunset is a post-demise financial operating system designed for Indian families. It addresses the critical gap between a person's death and their family's ability to discover, access, and claim their financial assets. The product enables individuals to proactively document their digital financial footprint and designate a Next of Kin (NOK) who can seamlessly access this information when needed.

The core value proposition is reducing the emotional and administrative burden on grieving families by eliminating the asset discovery problem — where families often don't know what assets exist, let alone how to claim them. Sunset is designed as a mobile-first experience, optimized for smartphones as the primary interface for both account holders and their Next of Kin.

Problem Statement

The Asset Discovery Crisis

India has witnessed a significant shift toward digital-first investments over the past decade. Educated individuals now hold assets across multiple platforms: mutual funds via apps, stocks via demat accounts, digital insurance policies, NPS contributions, fixed deposits across banks, and more. This fragmentation creates a silent crisis.

When someone dies, their family faces an overwhelming challenge: they often don't know what assets exist, where they are held, or how to claim them. Physical passbooks and paper statements have largely disappeared. Digital credentials die with the person. Families end up hiring lawyers and agents, paying hefty fees, and still missing assets that eventually get classified as unclaimed.

Scale of the Problem

- Over ₹78,000 crore lies unclaimed in Indian banks, insurance companies, and mutual funds
- The claims process for a single asset type can take 3-12 months
- Families typically discover only 60-70% of a deceased person's assets
- No centralized system exists for consolidated asset visibility

Target User

Primary User (Account Holder)

Educated, digitally-savvy Indians (25-55 years) who have accumulated assets across multiple digital platforms. They understand the fragmentation problem intuitively because they live it — they have 3-4 bank accounts, multiple mutual fund apps, insurance policies bought online, and no single view of their net worth. They're responsible planners who want to ensure their families aren't burdened after their death.

Secondary User (Next of Kin)

Spouse, adult children, or parents designated by the account holder. They need to be comfortable with basic smartphone usage but require no financial sophistication. The product must serve them during an emotionally difficult time with clarity and compassion.

Product Goals

1. **Comprehensive Asset Discovery:** Enable users to create a complete inventory of their digital financial assets through Anumati (Account Aggregator) integration, supplemented by manual uploads for unsupported assets.
2. **Secure NOK Designation:** Allow users to designate and verify their Next of Kin while alive, ensuring consent and awareness on both sides.
3. **Seamless Asset Revelation:** Upon verified death, instantly provide the NOK with complete asset information and clear guidance on claims procedures.
4. **Simplified Claims Journey:** Offer DIY guidance and partner services (Yellow) to help families actually recover the assets.

Scope

In Scope (V1)

- Mobile-first responsive web application (no native app for V1)
- Digital financial assets accessible via Anumati Account Aggregator (bank accounts, fixed deposits, mutual funds, insurance policies, NPS, securities)
- Manual upload for assets not covered by Anumati
- Single NOK designation per account holder
- Death certificate as sole proof of death
- Integration with Yellow for claims assistance

Out of Scope (V1)

- Physical assets (property, gold, vehicles)
- Cryptocurrency and international assets
- Multiple NOK designation with asset-level permissions
- Will creation or legal documentation
- Payment/subscription model

User Journeys

Journey 1: Account Holder Onboarding (Alive Flow)

Entry Point: User arrives at mobile landing page through marketing, referral, or organic search. The entire flow is optimized for thumb-friendly navigation and single-hand usage.

Step 1: Identity Verification

- User enters mobile number
- Parallel verification: Mobile OTP + PAN card validation
- PAN is required to query Anumati and serves as the unique identifier

Step 2: Consent & Data Fetch

- User provides consent for Anumati data pull
- OTP verification for Account Aggregator authorization
- Loading screen while data is fetched from FIP-registered entities
- Display fetched assets with individual values and total net worth

Step 3: Asset Completion

- User reviews auto-discovered assets
- Option to upload documents for assets not covered by Anumati (e.g., older policies, non-integrated platforms)
- Net worth calculation updates in real-time

Step 4: NOK Designation

- User selects/adds Next of Kin (name, mobile number, relationship)
- System sends notification to NOK
- Account holder waits for NOK verification

Step 5: Confirmation

- Once NOK accepts, account holder receives confirmation
- Clear explanation of what will happen upon death verification

Journey 2: NOK Onboarding (While Account Holder is Alive)

Entry Point: NOK receives notification (SMS/WhatsApp) that they've been designated.

Step 1: Verification

- NOK opens link and verifies identity via OTP
- Confirmation that they accept the NOK role

Step 2: Education

- NOK is informed about what Sunset does
- Clear explanation: no asset details are visible now
- Explanation of what to do if the account holder passes away

Key Design Principle: *The NOK sees NO asset information while the account holder is alive. This is a fundamental privacy safeguard.*

Journey 3: NOK Retrieval Flow (Post-Death)

Entry Point: NOK returns to Sunset after the account holder's death.

Step 1: Initiate Retrieval

- NOK triggers the retrieval flow from their dashboard
- System guides them through the process with empathetic messaging

Step 2: Death Verification

- NOK uploads death certificate
- System verifies document (manual review for V1, with potential automation in future)

Step 3: Asset Revelation

- Upon verification, complete asset list is revealed to NOK
- Individual asset values and total net worth displayed

- All uploaded documents are accessible

Step 4: Claims Guidance

NOK chooses their preferred path:

- **DIY Guide:** Step-by-step instructions for claiming each asset type, including required documents, forms, and typical timelines
- **Yellow Service:** Handoff to Yellow's professional claims assistance team for end-to-end support

Technical Architecture

Core Integrations

Anumati (Account Aggregator)

- Primary data source for financial asset discovery
- Covers FIP-registered entities: banks, mutual funds (CAMs/RTAs), insurance, NPS, securities (NSDL/CDSL)
- Consent-based architecture ensures user control
- Real-time data fetch with periodic refresh capability

Yellow

- External claims assistance service
- API integration for seamless handoff of asset information
- NOK can authorize Yellow to act on their behalf

Data Architecture

Data Type	Storage	Access Control
User Identity	Encrypted database	User only
Asset Data (Anumati)	Encrypted, tokenized	User (alive) / NOK (post-death)
Uploaded Documents	Encrypted object storage	User (alive) / NOK (post-death)
NOK Details	Encrypted database	User + NOK (limited)
Death Certificate	Encrypted object storage	Internal verification only
